The Gravity Chandelier by Paul Cocksedg re- imagines the chandeliers of the past. Inspired by changing rigidity to elasticity. The Gravity Chandelier is the definition of a modern chandelier. At first glance, it doesn't reveal its flexibility and cleverness; It takes a second look to unravel its mystery. With its flexible arms, you define the chandelier's diameter and choose where the light travels, but the suspended elements create natural curves shaped by gravity. The Gravity Chandelier comes in two sizes, after the number of arms, Gravity

Soda water is used to trap air in a super heated glass matrix, which is vertically stretched and folded back onto itself between pegs numerous times. As the glass cools, the folding motion along the grain of the loop turns the entrapped air into microfilaments that give the piece a pearlescent optical quality.

The design features a circular steel base with LED lights embedded around the edges and a translucent disk that scatters its light. The laser etches a subtle gradation pattern in a transparent acrylic resin, denting it toward the center and creating a radiating impression of sunlight. The light remains transparent on and off, elevated to a beautiful state by complex surface treatments.

BALLOONS

Balloons, a collection of timeless lights embodying rudimentary forms evoking images of hot air balloons, captivates with the beauty of large-format handblown glass and an elegant metal reflector hovering within. The design's charm lies in the use of two independent glass sections to achieve the impression of an integral whole. Lavish proportions and an elegant hand-pressed metal reflector are the collection's defining traits.

A combination of a robust marble base and an oval-shaped smoked glass dome. Designer found the inspiration for the soft curves of karl-johan while searching for wild mushrooms in an autumn forest – the shape of the lamp is indeed reminiscent of a mushroom. The poetic appearance and gentle light of karl-johan will complement any bedroom or add an elegant touch into the living room.

The kaipo too, designed by edward van vliet, radiates unity throughout its hand formed venetian glass. It is the successor of the first kaipo design, dating back to 2001. The lighting object still sports the classic shape of the archetypical lamp base.

Circular shapes dominate and are enhanced by the choice of materials. Brass takes centre stage, complemented by tempered glass, which diffuses the light of the led located inside. The after glow c, n and p are ceiling-mounted and can be used together in a composition or singularly. The after glow t is also part of the same lamp family.
