LOHJA

—

This iconic Cameron Design House pendant light is inspired by the tranquil lakes of Lohja, Finland. This contemporary design won The International Design and Architecture Award for best Pendant/Chandelier. Exploring tranquillity, space and equilibrium, the Lohja combines simplicity with geometry creating a striking, balanced sculptural form which changes appearance from each angle.

Every window where the lights slowly come
on is a story.

Unconventional modern design, geometric rings, interlocking layers, The clever design of the ring brings a beautiful visual impact. Simple and pure, rational and concise, there is no trace of excessive hustle and bustle, The interweaving of light and shadow allows us to fully perceive its charm, Let the living space be filled with natural spirituality.

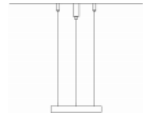

Hinting at the glamour and exuberance of the Art Deco period, the Salo Elama exudes mystique. Each ring emits light from both the internal and external sides through hundreds of individually cut and hand laid crystal profile diffusers. Bespoke options and design service available.

MACARON

The MACARON lamp pays homage to the beauty and complexity of the crystal. In the delicate, hand-blown glass of the opposite dome, the rock becomes a lunar landscape Boating in its own universe. The natural imperfections of glass and the diversity of stone make each lamp unique. The purity of natural materials and the craftsmanship used in the process make these materials take on an extraordinary atmosphere.

Porta il nome di un'amazzone mitologica questa importante storica lampada da tavolo di Leucos che affascina con il suo design essenziale e al tempo stesso sofisticato. Aella significa "tornado" e, infatti, il diffusore in vetro soffiato dalle forme morbide ed eleganti pare proprio materializzarsi da un turbine: da un punto, nello spazio, prende forma un suggestivo ed evanescente cono di luce che diventa fonte di armonia.

The endless charm of linear art is due to the versatility of lines. When it comes to lamps and lanterns, the fishline shaped wire is a symbol of simplicity, while the simple round lampshade and the combination of lines and surfaces are simple but with high-level aesthetic appeal.

AIM

While the common chandelier design hides messy wires, the Aim line does the opposite, using wires as part of the design. Break the traditional lighting design in the "Light source center" and "Hidden wire" principle. By adjusting the length and distance of the string, it acts like a machine gun, locking the direction of the light, working with multiple lights, and focusing on each focus; it can also be manually adjusted to meet the different needs of light focus.

HONEYCOMB

Like the cells of a beehive, the hexagonal modules of Honeycomb are joined freely into a suspension lamp with a captivating organic symmetry. The hexagons, connected by clips, give life to a self supporting structure capable of housing energy-saving LED and halogen light sources for direct and indirect light.

LOGIGO
2236

MATERIAL
COLORS

CARBON STEEL+GLASS
LVORY WHITE+EGG WHITE

The processing process of the glass lampshade made of polished silk can be seen whether the lamp is turned on or off. The unique combination of glass processing methods provides a blade cutting of the lower edge of the lampshade and the diamond edge of the polished filament surface, a complex and modular design, creating a large and light form of mixing.

This logic comes from the idea of a light-diffusion starting system, which organizes complex blown glass lampshades and uses them in different forms. Its modular and organic shape adds many creative elements.

BUDS

The Buds table lamp is a chic light that is made from a blown glass lampshade and a transparent, cylindrical base. The table lamp gets its name from nature, encapsulating all the beauty and grace that is seen in the natural world. The lampshade diffuses the light to create a soft glow, and the light also points upwards, acting as a lovely ambient lamp that is decorative and useful.

ARCO

White Carrara marble base. Satin stainless steel telescopic stem. A rotatable and height-adjustable aluminum reflector that is pressed, polished, and coated with nitrocellulose. "We were thinking of a light that would illuminate the table. They already exist, but you have to get around them. In order to leave enough space around the table, the base must be at least two meters away. That's where Arco's idea comes in.
